PROFESSIONAL SUMMARY

BCA student and web developer with hands-on experience building full-stack applications using React and Node.js. Successfully developed a real-time Kanban board and a chat application demonstrating proficiency in WebSockets and server-side logic. Proficient in JavaScript, HTML5, CSS3, MongoDB, AWS, and modern toolchains including Git, GitHub, Postman, and Linux. Skilled in REST APIs, Tailwind CSS, and cross-platform development with Capacitor and Next.js. Committed to clean code, scalable architecture, and continuous learning in web development.

EXPERIENCE

Web Developer Intern 15 Oct 2025 - 15 Nov 2025

Him Village E-Prahari NGO (HVEP)

Developed and maintained web assets supporting the organization's digital presence and community outreach. Collaborated with the internal team to troubleshoot technical issues and deliver frontend and backend improvements. Updated page layouts, visuals, and user flows to support the Foundation's sustainability and Waste-to-Wonder initiatives.

EDUCATION

Bachelor of Computer Application (BCA) in Computer Science 2023 - 2026

Swami Rama Himalayan University

SKILLS

HTML5 · CSS3 · Node.js · Express.js · Tailwind CSS · AWS · GitHub · Postman · Linux · Visual Studio Code · Next.js · REST APIs · WebSockets · MongoDB · PostgreSQL · Supabase · Firebase · VS Code · Git · Capacitor · React

PROJECTS

FlowBoard - Real-Time Collaborative Kanban

A full-stack project management app where teams organize work on shared boards and see updates live.

Technologies :-React 19, Vite, Node.js, Express 5, MongoDB, Mongoose, Socket.io, dnd-kit

Highlights :-

- Built a real-time collaboration system with **React, Node.js, Express, MongoDB, and Socket.io**, using HTTP for reads and acknowledged socket commands for mutations.
- Implemented board roles for owners, members, and viewers, plus card comments, assignments, due dates, activity history, and live collaborator presence.
- Added optimistic card updates with server-side ordering and version checks, so stale edits are rejected and clients reconcile with the authoritative board state.
- Added password and Google/GitHub sign-in, profile settings, and API security controls.
- Documented automated coverage for backend tests, live API checks, multi-browser collaboration, and mobile touch interactions.

Cipher - End-to-End Encrypted Chat App

A real-time chat application that encrypts messages in the browser before sending them to the server. The server stores ciphertext and cannot read message contents.

Technologies :-React, Node.js, Express, MongoDB, Socket.io, Web Crypto API, IndexedDB

Highlights :-

- Encrypts messages with AES-256-GCM and wraps content keys with RSA-OAEP.
- Stores private keys locally in IndexedDB; supports decryption by the sender and recipient on their current device.
- Uses Socket.io for live messaging and read receipts.
- Includes JWT-based authentication.
